

## ENVIRONMENTAL MANIFESTO

## ENVIRONMENTAL MANIFESTO

We are determined to contribute to the protection of the planet by progressively minimizing the environmental impacts associated with our operations.

We are aware of the risks that climate change and environmental degradation pose to humanity and sustainable business development. We want to address them responsibly, together with our stakeholders.

We pay attention to the development of environmental legislation in force in the countries and territories in which we operate, and we are constantly committed to ensuring compliance with applicable laws and regulations.

In this context, we want to promote sustainable development in line with the United Nations Sustainable Development Goals (SDGs) for 2030, acting responsibly in the following areas:

- **Management of energy consumption and atmospheric emissions**

We want to contribute to the Paris Climate Agreement by monitoring our greenhouse gas emissions and by taking appropriate energy efficiency initiatives.

- **Management of natural resources**

We are committed to adopting an approach based on the conscious use of natural resources, taking measures to recycle and reuse materials in a perspective of circular economy.

- **Protection of the landscape and biodiversity**

We believe that the landscape is a heritage of the community and we want to contribute to its protection, preserving the biodiversity that makes it unique and enhances local communities.

- **Stakeholders engagement**

We are committed to sharing this manifesto with our Stakeholders, encouraging the implementation of engagement initiatives in order to disseminating its principles.

We are therefore committed to being determined, aware and careful by continuing along our current path of sustainability, conscious of the common - but differentiated - responsibilities that we all have to safeguard the planet and the natural wealth that surrounds us.
